

LIQUID COOLING — QUICK DISCONNECTS & COUPLINGS

DATA CENTER COOLING

With over 88 years of experience, Shipp Hose & Gasket delivers liquid-cooling hose and coupling solutions built for the most demanding data center environments — the right product, the right compliance, and the right fit for your thermal management systems.

PRODUCT SPECS

01

DATA MASTER™ COOLING HOSE

Compact, metal-free cooling hose engineered for liquid cooling in data centers and high-density computing environments. Its peroxide-cured EPDM tube provides excellent flexibility, flame and ozone resistance, and reliable performance from -40°F to 212°F.

02

UNIVERSAL QUICK DISCONNECT

High-flow quick disconnect coupling designed for liquid-cooled data centers and OCP-compliant systems. Provides reliable, leak-free coolant connections with excellent corrosion resistance and compatibility with Gates Data Master™ hose assemblies.

03

UQD BLIND MATE

Blind mate quick disconnect coupling engineered for rack-to-manifold connections in high-density data centers. Self-centering design allows fast, leak-free connections while supporting hot-swap maintenance and minimizing coolant loss.

04

SANITARY FLANGE COUPLINGS

Stainless steel sanitary flange couplings for high-flow coolant supply lines and CDU connections. Compatible with a wide range of coolants and designed for secure, leak-free hose assemblies with easy installation.
